| 45. Sawtooth Oak            |                           |

### **NOTICE**

Trees in the Native Woody Plant Preserve (#28-50) are listed in alphabetical order NOT in the order that you will find them.

Please do not damage trees by yanking leaves or breaking branches. Remove leaves correctly by following the leaf stem to the branch and break the stem backwards. The leaf will snap off. This will also ensure that you get the entire leaf with respect to whether it is a "simple" or "compound" leaf.
